F2 — State transitions / routing

```
start → data_quality

→ (geomechanics | skip if check_case perfect)

→ [extra_validation if R_data low / missing / imputed]

→ predict → uncertainty

→ critic (OOD / physics / set / disagreement / validation)

→ if request_recheck: recheck_* tools (≠ first pass) → critic

→ loop++ ; if loop ≥ max_loops(8): forced abstain

→ finalize → fuse_assessment → decision bands + Critic escalate/downgrade

Hard gates: wide set + low stability; high disagreement; OOD∧weak physics

Consistency: abstain + R_final≈1 clamps reported confidence (M15)
```
